

AWS Cost Estimation Report

Cloud & DevOps Internship - Task 2

Region: eu-north-1 (Stockholm)

This report documents the AWS Pricing Calculator evidence stored in the repository. Exact numeric values are intentionally not invented where the source screenshots were not provided in machine-readable form.

1. Purpose

Task 2 requires a monthly infrastructure cost estimate using the AWS Pricing Calculator. The repository contains a set of pricing screenshots that document the calculator workflow and estimate.

2. Cost Evidence

Evidence file	Purpose
pricing-calculator.jpeg	AWS Pricing Calculator setup/evidence
pricing-estimate.jpeg	Estimated pricing result/evidence
pricing-overview.jpeg	Pricing configuration/overview evidence
pricing-payment.jpeg	Pricing/payment-related evidence

3. Reported Cost

Monthly estimate: Refer to cost/pricing-estimate.jpeg for the exact value recorded in the AWS Pricing Calculator evidence.

Annualized view: If the calculator screenshot provides a monthly estimate, annualize it as monthly estimate x 12. Do not substitute a value from another project.

This approach avoids publishing a cost figure that is not directly supported by the user-owned evidence.

4. Cost Considerations

- AWS charges can vary with resource runtime, storage, data transfer, pricing changes, and account eligibility.
- Unused EC2 resources and Elastic IPs can create unnecessary charges.
- S3 storage and data-transfer charges depend on actual usage.
- The AWS Free Tier and other account-specific terms should be checked before relying on an estimate as a bill forecast.

5. Repository Location

Cost evidence is stored under cost/. When the exact numeric total has been transcribed from the pricing-estimate screenshot, save this report as cost/cost-estimation-report.pdf and keep the screenshot alongside it.

6. Submission Note

This report is designed to accompany the AWS Pricing Calculator screenshots required by Task 2. The screenshot remains the authoritative source for the exact estimate recorded during the lab.
